

4 Fiber Optic Cable Adapters

Article Overview

Fiber optic adapters are devices that connect and align two fiber optic cables, available in various types such as LC, SC, ST, FC, and MPO, suitable for single-mode or multimode applications.

Overview of Fiber Optic Adapters

Fiber optic adapters, also known as couplers, are used to join two connectorized fiber optic cables, allowing light to pass through with minimal loss. They are essential for extending cable lengths, connecting different fiber types, or facilitating cable routing through panels and enclosures. Adapters can be single-mode (OS1/OS2) or multimode (OM1-OM5), and they come in duplex or simplex configurations depending on the number of fibers being connected .

Common Types of Fiber Optic Adapters

- LC Adapters: Small form factor, 1.25mm ferrule, ideal for high-density applications in data centers. Available in duplex or simplex, and in UPC or APC polish for low return loss .
- SC Adapters: Square-shaped, 2.5mm ferrule, push-pull mechanism, widely used in FTTH and telecom networks. Available in duplex or simplex, and in UPC or APC polish .
- ST Adapters: Bayonet-style twist-lock, 2.5mm ferrule, used in industrial or legacy networks. Provides secure connections in rugged environments .
- FC Adapters: Threaded coupling, 2.5mm ferrule, high-precision alignment, suitable for high-vibration environments like labs or industrial systems .
