

72-port network patch panel

Article Overview

A 72-port network patch panel is a high-density rack-mounted panel that organizes and connects multiple network cables, available in copper (RJ45) and fiber configurations, with modular and high-density options for efficient cable management.

Types of 72-Port Patch Panels

Copper Patch Panels:

- Typically support CAT5E, CAT6, or CAT6A cabling.
- Example: 72-port CAT6 RJ45 patch panels are 3U rack-mountable, support full-duplex data rates up to 1 Gbps, and include color-coded T568A/B wiring for easy installation and built-in cable management holders .
- Modular designs allow the use of compatible jacks and multimedia modules, such as Belden KeyConnect or Panduit Mini-Com® modules, for flexibility in network setups .

- #### Fiber Patch Panels:
- Designed for single-mode or multi-mode fiber connections.
 - Example: EDGE™ 72-fiber panels use MTP® adapters with rear backbone trunk connections and translucent shuttered adapters for protection and easy identification .

- High-density fiber panels can support multiple 12-fiber MTP adapters, optimizing rack space.
