

ASD Spectrum Analyzer

Overview

For more than 25 years, ASD FieldSpec, TerraSpec, and LabSpec spectrometers have set the standard for near-infrared (NIR) spectroscopy analysis in research, exploration, and industrial environments. ASD spectrometers and spectroradiometers provide state-of-the-art, real-time performance. It delivers enhanced performance in the SWIR 1 and 2 regions with 6 nm resolution, enabling quicker and more accurate data capture, particularly for. Recognised as the de facto NIR spectrometer technology, the portable TerraSpec 4 ASD is a user-friendly and rapid system for characterising hundreds of mineralogical samples per day providing the real-time information necessary to optimise the exploration process. The system can analyse outcrops. The SciAps reveNIR is a compact, ruggedized near-infrared device engineered for real-time, in-field mineral and material analysis.
