

Adjustable Focusing Laser Diode

Overview

Adjustable focus modifies the laser beam's focal point by altering the lens-to-diode distance, changing spot size and energy density to optimize task performance. Adjustable. Adjustable focus red dot laser. Ideal for industrial positioning, measuring, and pointing which would need a focusable laser beam at specific distances. This focusable laser module integrates laser diode, optical lens and driver circuit into a brass housing, user could rotate the rear end of module. Video 1. 1 Thorlabs' collimation and focusing tubes can be mounted in our CP33 SM1-Threaded Cage Plate using the AD15F adapter. Empty versions without optics included are also. Stand-alone or incorporated light sources are warranted for the lesser of one year or (to the extent applicable) the number of hours stated in the specifications. See Thorlabs' General Terms and Conditions. Compliance-Related Questions?

Email compliance@thorlabs. The Lasermate LJP series laser diode module is designed for OEM applications with very low cost, small size, good heat sink and beam.
