

Botswana Telecom Grade Router OSFP

Article Overview

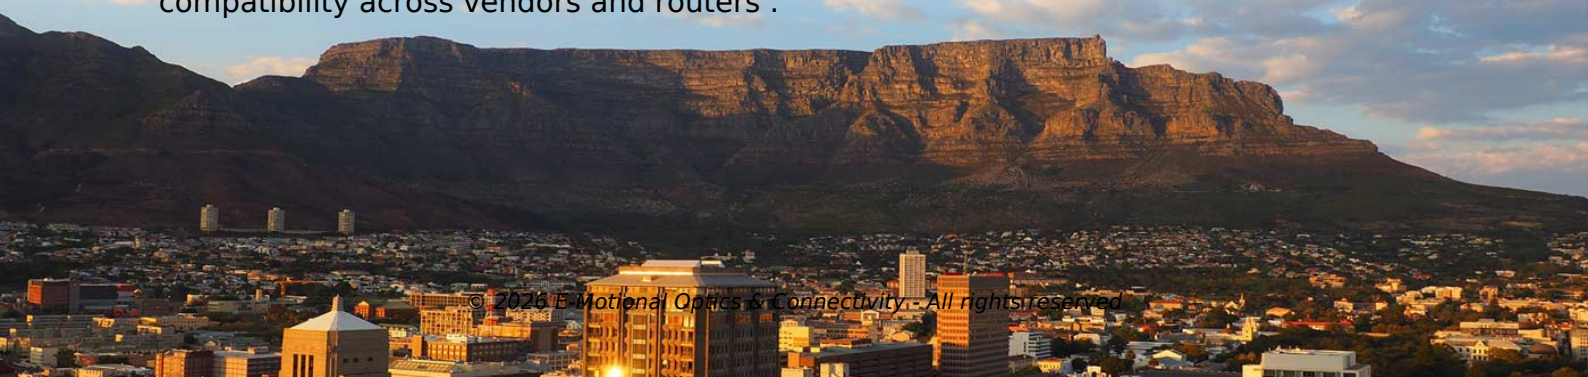

OSFP (Octal Small Form Factor Pluggable) transceivers are high-speed optical modules designed for 400G and 800G Ethernet, ideal for telecom-grade routers and data center interconnects.

Overview of OSFP

OSFP is an open standard optical transceiver designed to deliver ultra-high bandwidth, thermal efficiency, and scalability for modern networking environments . Unlike QSFP-DD, OSFP modules are slightly larger to accommodate higher power dissipation (up to 15-20W) and support 8 electrical lanes, each capable of 100G PAM4, enabling total bandwidths of 400G or 800G . This makes OSFP particularly suitable for telecom-grade routers that require reliable, high-speed backbone connectivity.

Key Features

- **High Bandwidth:** Supports 400G and 800G Ethernet, meeting the demands of hyperscale networks and AI-driven applications .
- **Thermal Management:** Larger form factor allows better heat dissipation, ensuring stable operation in high-performance routers .
- **Signal Integrity:** Designed to maintain signal quality at extreme speeds, critical for telecom-grade deployments .
- **Interoperability:** Defined by the OSFP Multi-Source Agreement (MSA), ensuring compatibility across vendors and routers .
