

Colorful Leakage Protection Switch

Article Overview

A colorful leakage protection switch is a safety device that detects electrical leakage and cuts off power, available in various designs including color-coded or smart models for enhanced safety and monitoring.

Overview

A leakage protection switch is an essential electrical safety device designed to automatically disconnect power when it detects current leakage, preventing electric shocks, equipment damage, and fire hazards. These switches are widely used in residential, commercial, and industrial installations and are also known as Residual Current Devices (RCDs), Earth Leakage Circuit Breakers (ELCBs), or Residual Current Circuit Breakers with Overload (RCCBs). Colorful or visually distinctive models are often used to improve identification, organization, and aesthetic integration in electrical panels.

Types and Functions

- RCDs: Monitor the balance between live and neutral currents. They trip within milliseconds if leakage exceeds a preset threshold (commonly 30mA), making them ideal for general-purpose protection, bathrooms, kitchens, and outdoor circuits.
- ELCBs: Older-generation devices, available as voltage or current types. Voltage ELCBs detect voltage on metal casings, while current ELCBs detect current imbalance. Suitable for retrofitting older systems.
- RCCBs: Advanced RCDs with enhanced tripping mechanisms, mainly used in main distribution boards and high-sensitivity circuits. They detect residual current but do not protect against overloads or short circuits.
