

Comparison of prices for good fiber optic patch cords

Article Overview

Yes, fiber optic patch cords can vary widely in price depending on fiber type, connector type, length, quality, and supplier.

Factors Influencing Price

Fiber Type and Mode: Single-mode fibers are generally less expensive per foot than multimode fibers, but multimode fibers may be preferred for short-distance, cost-sensitive applications . **Connector Type and Quality:** LC, SC, MPO, and APC connectors differ in complexity and precision. High-quality connectors with rigorous testing (IL/RL, interferometry, end-face inspection) command higher prices . **Cable Length and Jacket Type:** Longer cables increase cost linearly, while specialized jackets like LSZH or armored cables add extra expense for safety or durability . **Volume and OEM Customization:** Bulk orders reduce unit cost, but custom logos or labels can add setup fees. Regional standards and certifications (UL, ETL, IEC) also affect pricing . **Performance and Testing:** Cables with verified test reports and compliance with industry standards are more expensive but ensure reliability and lower long-term maintenance costs .

Typical Price Ranges

- Short LC-LC single-mode patch cords (3 meters): Approximately \$5–\$20 per unit depending on quality and testing .
- Multimode OM3/OM4 patch cords: Slightly higher, often \$10–\$30 per unit for high-performance applications .
