

Distribution Box Complete Protective Film

Article Overview

Protective films and sealing foams for distribution boxes safeguard electrical components from dust, moisture, and environmental damage, ensuring long-term reliability and compliance with IP standards.

Purpose of Protective Films

Protective films or sealing solutions are applied to distribution boxes to prevent ingress of dust, water, and other contaminants, which can compromise the safety and functionality of circuit breakers, fuses, and other electrical components. These films are particularly important for outdoor installations or environments with high humidity, temperature fluctuations, or exposure to chemicals.

Materials and Types

- Polyurethane-based foams (FERMAPOR K31): Provide excellent sealing for electronic distribution boxes, offering high resilience (>95%) and long-term durability.
- Silicone-based foams (FERMASIL): Ideal for outdoor use, resistant to extreme temperatures, and provide superior moisture protection with resilience >97%.
- ABS or Polycarbonate Enclosures: Many distribution boxes are made from ABS or polycarbonate, which are durable, impact-resistant, and compatible with protective films.
- Transparent Covers: Some boxes feature transparent covers that allow visual inspection while maintaining protection.
