

Distribution box 37 5

Overview

Upgrade your facility's electrical infrastructure with the 37.5 kVA Box Frame Power Distribution Unit—a purpose-built solution for small commercial environments, workshops, and temporary job sites requiring dependable, flexible power management. Fabricated with a rugged 16-gauge stainless steel, the transformer from Larson Electronics offers powerful, reliable and efficient power distribution in outdoor and public locations. The low operating costs, low heat emissions and low cost of ownership makes this transformer ideal for a wide range: 7.5 kV on the primary side and 120 – 480 V on the secondary side. The unit's cores are made from Grain Oriented Silicon Steel using state-of-the-art technology. This single-phase pole-mounted, low voltage dry-type distribution transformer means a distribution transformer that has an input voltage of 600 V or less, is air-cooled, and not used oil as a coolant.
