

Does the optical module make a sound when plugged in

Overview

Fiber optics do not emit any audible sound under normal operation. The only things that reasonably make sound would be mechanical elements such as cooling fans, pumps, etc. My TV doesn't output sound through the DIGITAL AUDIO (OPTICAL) OUT port. Below are some possible causes for this issue: The connected home theater system, audio receiver, or sound bar is not set to properly decode the digital signal. This feature is available on certain digital broadcasts and streaming videos and isn't supported on standard cable or analog stations. the noise sources in a fiber optic link include noise from the RF amplifiers in the transmitter, the laser diode, the photodiode and RF amplifiers in the receiver. So, in layman's term. Generically known as optical audio, the most common use of the TOSLINK optical fiber connector is in consumer audio equipment in which the digital optical socket carries (transmits) a stream of digital audio signals from audio equipment (CD player, DVD player, Digital Audio Tape recorder, computer. However I can also connect it via Optical,when I do does it mean that it will output sound to all other sources plugged into the tv, for example an Xbox or will it just output sound to whatever else is plugged into the amp?

Any Help is appreciated Archived post.
