Article Overview

Vanuatu's fiber optic network covers 65% of urban areas, with ongoing expansion to rural regions and subsea connectivity linking the nation globally.

Current Infrastructure and Coverage

By 2026, approximately 65% of urban areas in Vanuatu are served by fiber optic networks, significantly improving internet speed and reliability, with average broadband speeds reaching 45 Mbps . The government and private sector aim to expand coverage to 80% by 2028, bridging the urban-rural digital divide . Fiber optic networks are deployed both underground and aerially, connecting government offices, schools, hospitals, and commercial hubs .

Subsea and International Connectivity

Vanuatu has established its first subsea bandwidth cable, connecting the country to global internet networks. This enables high-capacity, low-latency communication and supports services ranging from 1 Mbps to 10 Gbps . Subsea connectivity is complemented by satellite (VSAT) services for remote islands, ensuring nationwide coverage where terrestrial fiber is not yet available .
