

# Fireproof cloth for distribution boxes

## Overview

Polyurethane (PU) Coated Glass Fibre Cloth is a halogen-free, gas-impermeable, Fire & Smoke fabric. It withstands short-term temperatures up to 600°C (1110°F) and offers high durability and thermal stability, making it ideal for applications requiring reliable heat and flame. To protect against overheated ECUs, we've manufactured an ECU fire protection system consisting of an ECU cover housed with intumescent lining. The flexible cloth can nestle around cables, conduits and trunking by cutting spaces into the cloth. In the event of fire, the intumescent cloth expands to. ABB offers an innovative enclosure system for fire prevention, which is constructed of fireproof materials, features optimum technology and is available in a variety of economical designs. These fabrics can be used as welding blankets, fire blankets, removable. Silicapro fireproof cloth is designed to provide reliable flame resistance and thermal protection. It remains non-flammable upon contact with open flame and performs well under continuous exposure to temperatures of up to 500 °C, withstanding even higher short-term peaks depending on the coating. General industrial use, the range includes caramelized, heat-treated E-glass fabrics offering flexibility, dust-free handling, and thermal resistance above 550°C.
