

First Access Network Real-Time Switch

Overview

One SIM switches between networks in real time across 150+ countries, with no SIM swaps, no app, and no interrupted sessions. Add real-time network switching to your product today. Assess your connectivity requirements and use case. Connect to the Firsty platform and configure switching. First Access software is extremely cost-effective and easy to use to manage the MAP1, MAP2 and MAPMINI door controllers. It is a traditional client/server solution available in Express or Advanced versions. Although classic fieldbuses are still running in large numbers, they have passed their prime. The popular real-time Ethernet protocols extended the Ethernet standard to meet the requirements for real-time. Postilion is a fully integrated set of modules designed to support electronic payments processing for banks, processors and merchants. Built using open systems technology, Postilion allows for the frictionless exchange of information between internal and external channels, creating a truly seamless. Cisco Services provide expert guidance to help you plan, design, implement, operate, and optimize your IT environment as well as AI-powered and expert-backed support to enable proactive and predictive IT operations.
