

Huawei switch light reception status

Overview

This problem can be detected by checking whether the light port is on, then checking whether the light module parameters such as wavelength, speed and transmission distance match, and then checking whether the gateway is configured and whether the VLAN is the same. The device has various indicators. By observing these indicators, you can determine the device's operating status and locate and rectify common hardware faults. If an indicator is in abnormal state, locate and rectify the fault. In order to ensure efficient operation and stability of the network, network administrators need to regularly monitor and manage the status and configuration of switches. With its excellent performance and rich functions, Huawei switches have become one of the preferred devices for many enterprise. The display command is the most fundamental and crucial information-viewing command for Huawei network devices (including switches, routers, etc. The method for starting and stopping viewing logs on a Huawei backbone switch depends on the. To check if there are any packet errors and negotiation modes on ports, you can use the command display interface.
