

Installation Scheme for Micro-modules in Computer Rooms

Article Overview

Micro-modules can be rapidly deployed in computer rooms through prefabricated assembly, site preparation, and integration of power, cooling, and IT subsystems.

Overview of Micro-Modules

A micro-module is an independent, prefabricated unit that includes IT racks, power supply units, cooling systems, cabling, monitoring, and fire protection. Each module operates independently, with minimal physical correlation to other modules, allowing flexible deployment and rapid assembly on site . Micro-modules are suitable for small to medium-sized data centers, branch offices, and modular expansions of larger facilities .

Site Preparation

- **Assess Site Constraints:** Evaluate available space, floor load capacity, ceiling height, and environmental conditions. Ensure the site can support the module's weight and cooling requirements .
- **Power and Network Provisioning:** Provide the necessary electrical supply (AC or HVDC) and network connectivity. Ensure redundancy and proper grounding for safety and reliability .
- **Cooling and Ventilation:** Confirm that the site can accommodate the module's cooling system, including airflow management for cold and hot aisles .
- **Physical Access:** Ensure sufficient access for module delivery, installation, and future maintenance.
