

Intelligent Modular Small Busbar

Overview

Intelligent Busbar is an end-of-row power distribution device designed for high-density data centers, replacing traditional row head cabinet and cable distribution methods, with advantages of small footprint, flexible expansion, and intelligent monitoring. The rack distribution busbar is also called intelligent small busbar. According to the user's layout requirements, sockets are widely opened in the busbar trunk unit, with a minimum spacing of. Dcib series intelligent small bus is a new type of bus, also known as guide rail type air insulated intelligent bus duct, which is an overhead power distribution system. The inner conductor is of circuitous U-shape structure, and the plug-in box is locked and fixed by rotation, so as to facilitate plugging and unplugging the plug-in box. The Inspur. The Soetec intelligent busbars feature a flexible, innovative design with overhead suspension and cabinet top bracket options, optimizing distribution structure to support up to 630A current.
