

Ireland Cold Aisle 19 inches

Article Overview

Cold Aisle Containment (CAC) systems in Ireland can be configured with 19 mm perforated panels to optimize airflow and energy efficiency in data centers.

Overview

Cold Aisle Containment (CAC) systems are designed to isolate cold air supply in a data center aisle, preventing mixing with hot exhaust air and improving cooling efficiency. In Ireland, the CAC market is growing due to the expansion of hyperscale data centers and energy efficiency mandates, with demand driven by both new builds and retrofits of existing facilities. These systems typically include modular panels, doors, roofs, and monitoring accessories.

19-Inch Panel Specifications

For a 19-inch configuration, which corresponds to standard server rack widths, CAC panels can feature 19 mm perforations to allow controlled airflow while maintaining containment. Key technical details include:

- Panel thickness: Options of 2.0 mm, 2.5 mm, and 3.0 mm steel
- Punched holes: 12.7, 19, 25, 33, 38, 45 mm square with rounded corners; 19 mm is commonly used for airflow optimization
- Height: Panels can be manufactured up to 8.0 m to accommodate various aisle heights
- Frame: 50 mm x 50 mm box section, with 1.5 mm standard thickness
