

Location of electrical distribution boxes in Tunisia

Article Overview

Electrical distribution boxes in Tunisia are typically located at substations, along streets, inside residential, commercial, and industrial buildings, and near transformers within medium and low-voltage networks.

General Placement

Electrical distribution boxes, also known as electrical panels or switchboards, are installed to manage and distribute electricity safely from the main supply to end users. In Tunisia, these boxes are commonly found in:

- Residential areas: Inside homes or on exterior walls, often flush-mounted or surface-mounted for easy access and safety .
- Commercial and industrial buildings: In dedicated electrical rooms or near machinery, warehouses, and workshops, often using prefabricated busbar systems or modular switchboards for flexibility and high power handling .
- Public infrastructure: Near street transformers, utility poles, or underground vaults to serve multiple buildings or street lighting .
- Substations: Medium-voltage (15 kV) and high-voltage (33 kV) substations in cities like Gabes are equipped with feeder breakers, reclosers, and protective relays, which connect to distribution boxes that feed local networks .
