

New Mexican OTDR Test Module

Overview

The new RXT-4113+ is our latest generation xWDM OTDR module. Users can now select CWDM, DWDM, combo CWDM+DWDM or DWDM+Legacy optical configurations. Combines with the FG-750 or RTU-2 as part Nova Fiber remote fiber testing system. Test access module (TAM) is the common and standard name given to a fiber-optic coupling element, which is used in remote testing and monitoring applications to combine the OTDR signal with traffic. The device used to. The RXT-4100+ Fiber Optics test module for the VeEX® RXT-1200 platform is the world's first field portable OTDR to offer up to 500,000 data points with 3 cm resolution. The lightweight and compact SmartOTDR speeds and optimizes field testing of metro and access. EXFO's FTB-7000 series delivers the right tools for accurately detecting and characterizing splices, connectors, splitters, breaks and other events along the fiber, providing a wide choice of configurations to conveniently test all types of networks. The OTDR sends a pulse of laser light into one side of the optical fiber.
