

Photovoltaic power generation transformer ring network switch

Overview

A ring main unit (RMU) is a factory-assembled, metal-enclosed medium-voltage switchgear unit used in ring-type power distribution networks. It normally includes two ring feeder switching units and one transformer feeder protected by a fuse-switch or circuit breaker. It is widely applied in areas such as residential district distribution, industrial parks, wind power generation, and photovoltaic power plants. Ring network power supply refers to. Brunstock's step up transformer substations are designed to convert power on solar farms from LV to MV. A Brunstock step up. Overview □ ZGS series new energy (photovoltaic/wind) power generation combined transformers is pad-mounted transformer, which combines transformer body, oil immersed load switch, oil immersed fuse, switchgear, low voltage power distribution device and other supporting equipment.
