

Price of Bend-type Cable Trays

Article Overview

The price of the largest cable tray bends, such as a 450mm heavy-duty 90° bend, typically ranges from \$50 to \$150 per unit depending on material and supplier.

Overview of Large Cable Tray Bends

Large cable tray bends are used to route cables around corners or obstacles in industrial and commercial installations. The largest standard bends are usually 90° elbows for heavy-duty trays with widths of 450mm or more, made from pre-galvanized steel, stainless steel, or aluminum for durability and corrosion resistance . These bends often include integrated couplers for secure installation and compatibility with systems like Unitrunk, Unistrut, or Metsec .

Pricing Factors

- **Material:**
 - Pre-galvanized steel: Common for heavy-duty applications; moderate cost.
 - Stainless steel (SS304/SS316): Higher corrosion resistance; more expensive.
 - Aluminum: Lightweight and corrosion-resistant; mid-range pricing .
- **Bend Size and Angle:**
 - Larger widths (e.g., 450mm) and 90° bends are more expensive than smaller or 45° bends .
 - Custom or non-standard bends may increase cost.
- **Supplier and Quantity:**
 - Bulk orders can reduce unit cost; for example, small wire mesh bends start around \$0.8 per unit for bulk purchases .
