

Public General Lighting Distribution Box

Article Overview

A Public General Lighting Distribution Box is an electrical enclosure that distributes power, controls circuits, and protects public lighting systems in outdoor and indoor public areas.

Function and Purpose

A public lighting distribution box is designed to distribute electrical energy from the main supply to various lighting fixtures, such as street lights, park lamps, and public area lighting inside or outside buildings. It ensures that each lighting circuit receives the appropriate power and allows for on/off control and brightness adjustment according to time schedules or operational needs. These boxes also provide protection against overloads, short circuits, and leakage, preventing electrical hazards and equipment damage (E-TigerMade) .

Key Components

- **Circuit Breakers:** Automatically cut off power during overloads or short circuits to protect lines and lamps.
- **Multi-function Meters:** Monitor voltage and current in real time for operational oversight.
- **Dual Power Supply:** Controls high-power lighting circuits and ensures redundancy.
- **Fuses:** Provide additional short-circuit protection by quickly disconnecting faulty circuits.
