

Sealing and protective accessories for distribution boxes

Article Overview

Sealing and protective accessories for distribution boxes ensure environmental protection, safety, and long-term reliability of electrical systems.

Sealing Solutions

Sealing products are essential for protecting distribution boxes and electrical panels from moisture, dust, pollutants, and other environmental hazards. Common sealing solutions include:

- Rubber or silicone gaskets: Provide airtight seals at doors, panels, and connection points, preventing water and dust ingress .
- Gland seals: Protect cable entries from moisture and dust, ensuring safe operation of electrical equipment .
- Foam seals: Polyurethane or silicone foams applied via automated processes create seamless gaskets around control cabinet panels, enhancing protection against corrosion and contamination .
- Potting and gluing systems: Encapsulate sensitive electronics to prevent damage from environmental exposure . These sealing solutions are often applied using FIPFG (Formed-In-Place Foam Gasket) technology, which ensures a continuous, contour-accurate seal without cut edges, improving durability and reliability .

Protective Accessories

Distribution boxes also require accessories to support proper installation and protection:
