

Small test head for optical power meter

Overview

Optical scanning heads enable Closed-Loop testing to be performed on energy meters by counting the optical active and reactive energy pulses. Different types are available for counting the optical LED pulses of digital meters or the rotor marks of electromechanical meters. Sensor types include InGaAs, germanium, and silicon. Optical power heads and connecting interface modules providing accurate measurements over a variety of wavelength ranges Sie haben bereits dieses Produkt?

Technischen Support anzeigen The 5mm detector area on Keysight's latest optical power heads allows flexible placement of the remote optical. ACP8721C USB Fast Sampling Optical Power Meter Head offers superior performances for testing of DWDM components, AWG & PLC components, optical amplifiers, and other general purpose fiber optical test and measurement applications. It is designed especially for volume production line applications. To view the full specifications, download the spec sheet below. The OHS-1700 is a remote power measurement sensor that.
