

# Solution for 1000mm Depth Four-Port Information Panel

## Article Overview

A 1000mm depth four-port information panel can be effectively implemented using angled modular faceplates, DIN rail-mounted panels, or optical breakout patch panels, depending on fiber or copper requirements.

### Angled Modular Faceplate Solution

For shallow or deep enclosures, Leviton QUICKPORT™ Universal 4-Port Angled Modular Faceplates provide a compact and flexible solution. These faceplates support up to four modular jacks with a 30° angled exit, which helps maintain proper bend radius in deep or narrow channels. The universal latching system allows mounting in two orientations, and the quick-release latch supports easy moves, adds, and changes, making it ideal for furniture panels or deep racks up to 1000mm depth .

### DIN Rail-Mounted Patch Panels

For industrial or control panel applications, Siemon DIN rail-mounted patch panels offer a modular approach for both copper and fiber connectivity. These panels feature a low-profile angled design to minimize cable bend radius, are side-stackable for expansion, and can accommodate shielded or unshielded Category 6A/7A copper outlets or fiber adapter modules. They are compatible with standard 35mm DIN rails and provide strain relief for secure connections, making them suitable for deep enclosures where space optimization is critical .

### Optical Breakout Patch Panels
