

Waterproof rating of distribution box

Article Overview

Distribution boxes typically feature IP65 to IP68 ratings, providing protection from dust, water jets, and temporary immersion depending on the specific rating.

IP Ratings and Water Protection

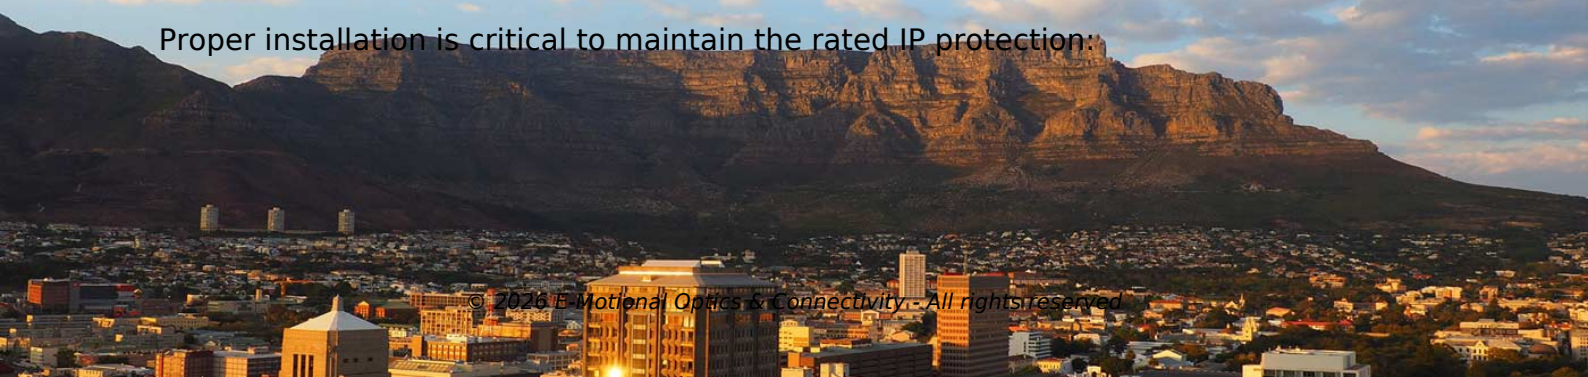

- IP65: Protects against water jets from any angle (12.5 L/min at 30 kPa), suitable for outdoor exposure to rain or splashes .
- IP66: Offers protection against high-pressure water streams (100 L/min at 100 kPa), ideal for industrial washdowns or heavy rain .
- IP67: Can withstand temporary immersion in water up to 1 meter for 30 minutes, useful for areas prone to flooding or accidental submersion .
- IP68: Provides continuous immersion protection beyond 1 meter, typically for specialized outdoor or marine applications .

Material Considerations

Waterproof distribution boxes are commonly made from ABS or polycarbonate plastics, which are lightweight, impact-resistant, and UV-stabilized to prevent yellowing or cracking in sunlight . Some boxes use metal enclosures with reinforced gaskets for higher durability in industrial settings . The choice of material affects long-term waterproof performance, mechanical strength, and resistance to environmental stress.

Installation and Sealing

Proper installation is critical to maintain the rated IP protection:
